DETAILED ACTION

Document Handling Issues

The electronic file (Image File Wrapper) for this case includes two documents (filed February 24, 2003) which belong to a different application. Therefore they have not been considered.

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references (specifically, the reference mentioned in page 9, line 18) have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, last paragraph, lines 3 and 6-7, the term "pixels divided in the lengthwise direction" is unclear since the figures show pixels which are arranged in the lengthwise direction, not divided. In claim 1, last paragraph, lines 5 and 9, the term "for an area in the area" is unclear. In claim 1, last paragraph, line 11,

the term "adding the pixel data" is unclear since adding could imply either numerical "summing" or data "arrangement."

Allowable Subject Matter

Claims 1-5 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

The following paragraph, proposed for replacement of the last paragraph of claim 1 and considered to distinguish patentably over the art of record in this application, has been drafted by the examiner and is presented to applicant for consideration:

--integration processing means for carrying out a first conversion process
to generate data corresponding to pixels located in areas where only one pixel
output is available for a particular area which is irradiated by the excitation light
and to generate data corresponding to pixels located in areas where two or more
pixel outputs are available for a particular area which is irradiated by the excitation light
by adding two or more of the outputs
and for carrying out a second conversion process
to generate data of a final image by combining the pixel data arranged over a
predetermined number of pixels consecutively lined in the lengthwise direction.--

The following is a statement of reasons for the indication of allowable subject matter: Claim 1, as far as understood, includes limitations that a stimuable phosphor reading apparatus comprises integration processing means for carrying out data

processes for image pixel data corresponding to individual detector pixels and for image pixel data corresponding to two or more detector pixels.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Describes a stimuable phosphor reader which calculates the value of an image data pixel by using data from a plurality of pixels (abstract).
